

Solution Overview

Flextops for Education

Creating Low Cost, Low Maintenance, Reliable Flextops for Classrooms and Labs

Double-Take® Flex powers existing desktops and thin clients to run Microsoft Windows 7, XP Pro, or Vista without a local hard drive. Double-Take Flex takes one centrally managed PC image and streams it (SDI - Streaming Desktop Infrastructure) to every PC in the classroom. By streaming one desktop image, time-consuming and costly management tasks such as OS upgrades, patch management or new application installations are completed centrally and one time only on the Double-Take Flex server, completely eliminating the need to "touch" individual desktops - saving time and increasing the simplicity of managing existing desktops or deploying new ones.

What is a Flextop?

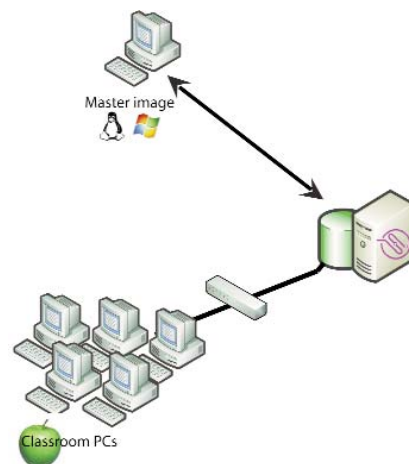

A desktop/PC without local storage. A Flextop from Double-Take Software uses the network to provide the OS, user permissions and settings, applications, and storage - without a local hard drive. With Double-Take Flex your classroom computing environment is more reliable and easier to manage.

Features:

- Streaming OS with applications
- Support for WIN7, XP, Vista, Linux
- Reboot to a clean image
- 100% compatible with apps, peripherals and multimedia
- Centralised management

Take Back Control

Double-Take Flextops are compatible with all PC applications and peripherals and deliver teachers and students the full educational & multimedia experience of Microsoft Windows 7, XP, and Vista. Administrators have the option to patch or upgrade computer software, giving students a brand-new, fresh computer in every reboot or the option to customise and retain each individual's settings for a flexible, customised learning experience.

With the Double-Take Flex NOMAD architecture, IT administrators have the option to customise each user's workspace, allowing students to log into any PC desktop and receive their own personalised image. NOMAD architecture means that a student's personalised image can follow them anywhere. No matter where that student sits, their image follows.
